EDUCATION

The University of Sydney

Bachelor of Engineering (Honours), Software Engineering
• Honours Class II, Division 1

Sydney, NSW

Graduated January 2026

WORK EXPERIENCE

Skill Samurai

Programming & Robotics Instructor

Burwood, NSW

August 2023 – Present

- Improved student technical outcomes by teaching Python, Java and C with a focus on software engineering best practices, analytical thinking and problem solving across a diverse range of ages and experience levels.
- Built strong communication and collaboration skills by designing and delivering technical workshops in application development and robotics, adapting content clearly for both technical and non-technical audiences.

IT Support Pals

Software Engineer / Consultant (Internship)

Chippendale, NSW

November 2024 – February 2025

- Delivered a production web application on time across a 9 week sprint by working across the full stack in React, Node.js and Firebase within an Agile team of 5 engineers, contributing to code reviews, CI/CD processes and structured delivery.
- Ensured the application met stakeholder expectations by maintaining continuous client communication, presenting progress updates, translating feedback into actionable requirements, and flagging scope and technical risks.

Asiga

Software Engineer (Capstone)

Alexandria, NSW

August 2024 – November 2024

- Developed algorithms for automatic support structure generation for 3D models across both STL and SLC file formats by researching Python 3D processing libraries and designing modular, reusable components.
- Increased test coverage from 43% to 94% across 12 weeks of iterative development by authoring end-to-end, unit and non-functional tests and incorporating client feedback directly into acceptance criteria.

PROJECTS

Sunrise | React, Node.js, Firebase, CSS

- Shipped a full stack progressive web application from zero to production by owning all development across a React frontend, Node.js and Firebase backend, featuring real time vision tracking and speech volume recognition.
- Maintained system reliability throughout production by monitoring application health, debugging issues across the stack and iterating quickly based on real usage feedback.

KirchhoffNet Neural Network Simulation Toolbox | Python, PyTorch, SciPy, NumPy, Matplotlib

- Built an analogue neural network research platform by designing and implementing a Python based simulation toolbox with a physics based device model, managing the full lifecycle from architecture through to testing and documentation.
- Improved analysis reliability across multiple model configurations by building automated benchmarking and performance evaluation pipelines.

DOLMA: Intelligent Personal Assistant | Python, React, OpenAI API, REST APIs

- Produced an AI powered personal assistant with natural language calendar management, schedule optimisation and conflict resolution by integrating OpenAI's API and personally owning the full system architecture, interaction diagrams and state machine diagrams.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, HTML, CSS, responsive design, component architecture

Backend & Databases: Python, Django, Node.js, REST APIs, Firebase, Supabase, SQL, JWT

Testing & DevOps: TDD, Django APITestCase, CI/CD, Git, AWS, Agile, system design

AI & Tools: OpenAI API, LLM integration, prompt engineering, GitHub Copilot, Claude Code
